

Your Data, Your Information

Research data is collected to answer a specific research question.

For example, which pill lowers blood pressure better? Red or Blue?

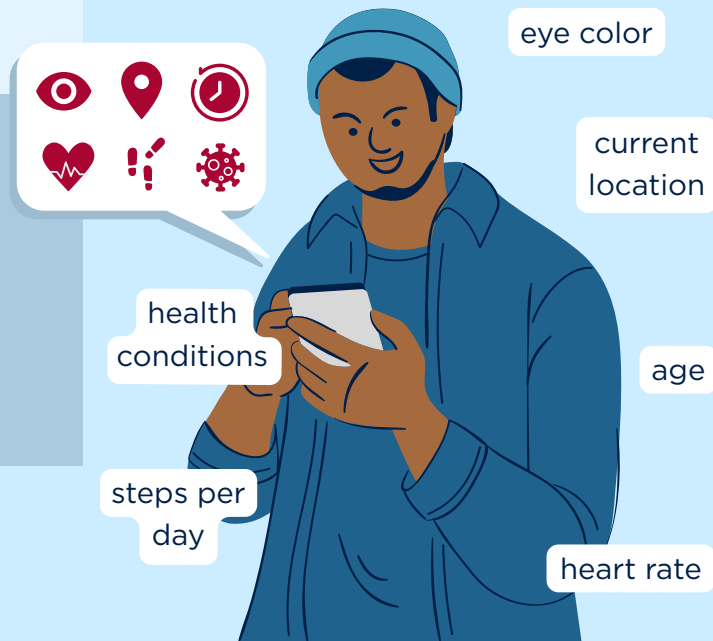

Joining a study is your choice.

Your data will be collected with your consent.

What is your data?

Data is any information collected about you.

How is my data protected?

Research teams apply a code to your data to protect your privacy and make it harder to link the data back to you.

You have the right to ask questions about your data.

- What data will you collect from me?
- How will you use my data?
- How will you protect my data?
- What are the risks of giving you my data?
- Will anyone else see or use my data?
- What will happen to my data when the study is over?
- Will you share the results of the study?
- Will I learn the results of the study?
- If someone sees my data who should not, what happens?
